ImageComponentSelector_Infrared	The acquisition of non-visible infrared light is controlled.
ImageComponentSelector_Ultraviolet	The acquisition of non-visible ultraviolet light is controlled.
ImageComponentSelector_Range	The acquisition of range (distance) data is controlled. The data produced may be only range (2.5D) or a point cloud 3D coordinates depending on the Scan3dControl.
ImageComponentSelector_Disparity	The acquisition of stereo camera disparity data is controlled. Disparity is a more specific range format approximately inversely proportional to distance. Disparity is typically given in pixel units.
ImageComponentSelector_Confidence	The acquisition of confidence map of the acquired image is controlled. Confidence data may be binary (0 - invalid) or an integer where 0 is invalid and increasing value is increased confidence in the data in the corresponding pixel. If floating point representation is used the confidence image is normalized to the range [0,1], for integer representation the maximum possible integer represents maximum confidence.

StreamBufferHandlingMode_OldestFirstOverwrite	The application always gets the buffer from the head of the output buffer queue (thus, the oldest available one). If the output buffer queue is empty, the application waits for a newly acquired buffer until the timeout expires. If a new buffer arrives it will overwrite the existing buffer from the head of the queue (behaves like a circular buffer).

Enumerator

StreamBufferHandlingMode_NewestOnly	The application always gets the latest completed buffer (the newest one). If the Output Buffer Queue is empty, the application waits for a newly acquired buffer until the timeout expires. This buffer handling mode is typically used in a live display GUI where it is important that there is no lag between camera and display.
StreamBufferHandlingMode_NewestFirst	The application always gets the buffer from the tail of the output buffer queue (thus, the newest available one). If the output buffer queue is empty, the application waits for a newly acquired buffer until the timeout expires.
