CONFERENCE PAPERS: (Direct students, postgraduates, mentees, visiting faculty marked with asterisk *)

Note: In computer science (e.g., data mining or machine learning), there is a tradition of submitting the best work in high-visibility and highly selective conferences. These conferences are usually almost always more selective than ASCE journals, with some top conferences, such as KDD, ICDM or SIAM Data Mining, being much more selective. Workshops, such as those organized in conjunction with KDD and ICDM, are less relatively much less selective than the regular conferences, but are usually still more selective than ASCE journals. A few of the computer science conference or workshop papers are occasionally further developed for journals. Non-computer data scientists (e.g., electrical engineers, statisticians, nonlinear physicists) prefer journals, and these days some computer scientists are also beginning to do so. In civil and environmental engineering, or climate and water areas, conference papers may range from being mildly peer reviewed (less rigorous than ASCE journals) to not peer-reviewed at all, with some of the latter (such as AGU fall meetings) merely requiring abstracts (which need to be presented orally or as posters).
